Annual Report

For the period of 2008

Circle Four Farms
Facility Name

PO Box 100 Milford 84751
Facility Street Address *City* *Zip*

Project Status

On a separate sheet, summarize:

- your Clean Utah project commitments and accomplishments made to date,
- major indicators of environmental improvements (measurable ways that you are determining the environment is improving as the result of steps you are taking),
- public participation activities you have undertaken, and
- your project plans for next year, as they relate to this program.

Certification Statement

(to be signed by the senior facility manager)

I certify that the information outlined in the attached annual report is correct and that this facility continues to meet all program criteria and has an active EMS, as defined by the Clean Utah program. I further certify that this facility has conducted periodic assessments of compliance with legal requirements, has corrected all identified instances of noncompliance, and is currently in compliance with all applicable federal, state, and local environmental rules and regulations.

Title

Clean Utah Annual Report 2008
Circle Four Farms

Project #1

Lease property in Utah for wind farms

Target Date: September 30, 2009

Results of investigation: We have signed all applicable lease agreements in order to lease our property for windmills to be constructed and to start generating electricity. Currently the project is delayed due to some of the financial institutions failing that had financed the project. The project is currently accepting delivery of materials but is not constructing. The project is scheduled to begin construction starting in the middle of March

Benefit to the environment for the year: When the project is up and running the majority of the project will be constructed on Circle Four property. The project will generate approximately 200 megawatts of power from a renewable source. Since Circle Four is the largest private property owner in the project if we would not have participated in the project then it would be doubtful that the project would have happened.

Benefit or savings to the company: Circle Four will realize lease income from the property. Most of the power generated is being used in neighboring States but should reduce or limit coal fire plants being built or expanded in Utah.

Targeted Goal 2009: The project should be at least partially constructed within the next calendar year.

Project #2

Implement new tools and procedures which includes the installation of recycle systems protected from freezing at 42105-8 and 42307-8

Target Date June 1, 2009

Status of installation: We completed the installation of two systems this past summer. However, this was a new installation and a trial, we found some things with the new system that didn't work well so we have re-designed the system and have installed it on two other farms. The new system was implemented in December 2008, so we have not had time to fully evaluate its effectiveness.

Benefit or savings to the company: There will be electricity savings as well as spill impact benefits to the project.

Targeted Goal 2009: Our goal is to save half of the power that we normally use by running these pumps. We expect to have no spills resulting from the recycle pumps running.

Public Participation

We sent two community newsletters over the past year updating the community on items of interest for Circle Four. We have also participated in numerous community events and have participated financially in numerous public events and projects.
